Why work with Cognitec

Most experienced and highly trusted

With a focus on face recognition technology for almost 25 years, Cognitec is proud to maintain a stable, leading position in the industry, and strives to deliver the most reliable biometric solutions to government and commercial clients worldwide.

Research and development in Germany

Our research and development team uses state-of-the-art machine learning techniques and deep learning principles to achieve continuous advancement of the various algorithms contained in our core technology.

Support in Sydney, Boston and Dresden

Regional offices support Cognitec's clients in Asia Pacific, the Americas and EMEA. Our clients rely on collaborative customer service, fast response times, dedicated help desk portals, and competent problem solving. We also offer expert training programs and consulting services.

Superior technology

Our algorithms perform the most important face recognition tasks with market-leading speed and accuracy. Independent technology evaluations and real-life installations continue to prove the exceptional performance of Cognitec's technology.

Solutions for all prominent applications

Alongside image database searches that prevent ID fraud and support criminal investigations, Cognitec's technology drives cutting-edge video security, smart city, eGate, building access, people analytics, photo indexing and mobile authentication solutions.

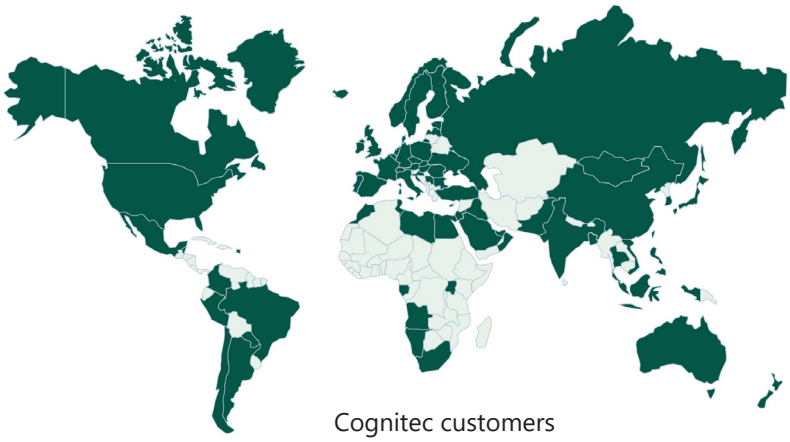
Successful projects worldwide

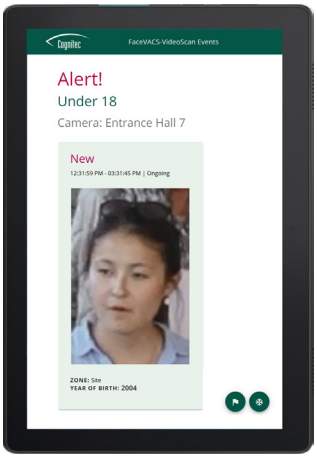
Since 2002, Cognitec has partnered with more than 400 clients, value-added resellers and system integrators in 50+ countries.

Among hundreds of current projects, we power more than 1000 automated border control solutions, hundreds of cameras in smart-city installations in India, and real-time watch list alerts for several large, international casino operators.



Cognitec customers

Market-leading products



FaceVACS-DBScan ID

compares images from different sources to those stored in multi-million image databases, preventing ID fraud and managing large ID photo databases.

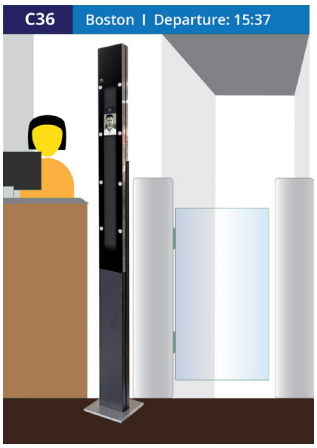
FaceVACS-DBScan LE

combines our image database search technology with powerful video inspection tools for a multitude of investigation use cases.

FaceVACS-Entry

quickly captures ISO-compliant facial images and verifies the person's identity during border checks and various ID issuance processes. The slim, light-weight device installs in eGates and kiosks, on desks and walls, and in pillars.

FaceVACS-VideoScan



recognizes people's faces in live video streams and video footage, compares them to image databases, and instantly finds known persons. Anonymous facial analysis computes data to analyze demographics and track people flow.

FaceVACS Engine

enables customers to develop new applications that utilize our market-leading face recognition technology.

FaceVACS Engine for Portrait Acquisition

streamlines the production of high-quality photos suitable for ID documents, and performs compliance checks for ISO 39794-5 and other standards.
